

FastCollect™ for Zoom

Ensure Zoom communications are captured and managed to meet your regulatory, privacy and risk management obligations

Zoom enables employees to present to and collaborate with anyone, anywhere, creating millions of records daily that could expose your organization to legal, regulatory and data privacy risks. Zoom meetings can provide visibility into attendee personal information (i.e.- in the background you might see religious symbols or items indicating political affiliation) and behavior, leading to potential complaints of harassment, discrimination, and retaliation, exposure of sensitive information or other costly policy violations.

Archive360 provides a highly scalable and secure archiving and data governance platform that centralizes the management of all types of structured and unstructured data – including messages, emails, and files – to meet today’s regulatory, legal, and business intelligence requirements. Archive360 FastCollect™ for Zoom automatically captures content directly from Zoom in its native format and in full context so you can quickly find an investigation’s relevant data, review Zoom content like it appears in Zoom and easily interpret conversations, protect the data against alteration, and produce audit logs to help legal teams maintain defensibility.

Collaboration meets Compliance

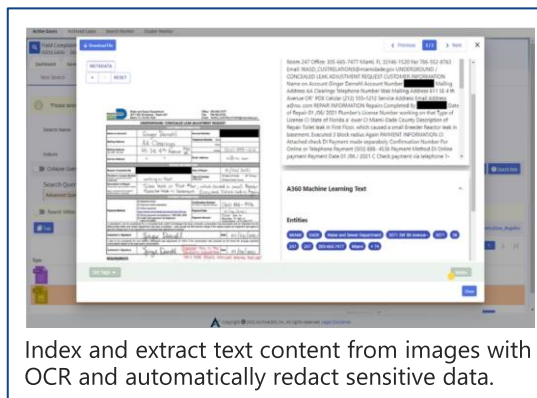

Ensure SEC, FINRA, MiFID II and other regulatory requirements are met easily and cost-effectively by automatically capturing Zoom communications. Once in the Archive360 archive, chat messages aren’t flattened into an email format like in other archiving applications. All content is captured and retained in its native format, so you can quickly and easily review Zoom content in full context as it appears in Zoom with our and/or leading e-Discovery solutions.

Built for the Cloud

Archive360 is the first intelligent information management and archiving platform built for the Azure Cloud. This means that your sensitive Zoom data, as well as all other archived data, always stays in your cloud under your direct control – encrypted with your keys. Unlike other vendors, Archive360 provides full data onboarding and cloud management of your Zoom data, all in one solution. Why pay for and rely on a proprietary third-party cloud provider with confusing, questionable security controls and data processing restrictions?

Intelligent Risk Mitigation

Archive360 captures multiple communication channels including email and is optimized for organizations with heavy collaboration workloads. When conversations happen across Zoom, email, or other channels you can search and review the entire conversation within the Archive360 platform. All Zoom content can be appropriately (based on content, context, ownership and geographic location) secured, archived, indexed, and classified. With Supervision & Surveillance, potentially sensitive data and PII can be identified, and reviewers automatically alerted to policy violations.

Automatically Archive and Manage Zoom Conversations and Content

Communication Types

- Chats (public & private)
 - Individual
 - Group
- Meeting & Webinar Recordings

Chat Content

- Emojis, GIFs, Stickers
- Audio and video recordings
- Links
- Message edits
- Message deletions
- Shared files
- Reactions
- Mentions

Meeting / Webinar

- Chats
- Shared files
- Recordings / Transcripts
- Breakout rooms

Unmatched Zoom Content Protection

- Zero-Trust security model – It's your data, in your cloud, under your control – unlike SaaS solutions, you have complete control over infrastructure and information security protocols.
- Secure attribute- and role-based access control with all activities recorded in a complete chain of custody.
- Our optional Security Gateway enables you to:
 - Encrypt your data on-premises before moving it to the cloud.
 - Store / manage your encryption keys on-premises – apart from your data stored in the cloud.
 - Use unique encryption keys and data classification to apply fine-grained access control to specific sensitive words or characters sets within a file as well as the file's metadata through masking, anonymization, or redaction.
 - Even system administrators can't access the data without explicit approval

Compliance Archiving & The Power of PaaS

- Zero vendor lock-in! Your Zoom data is stored in your cloud tenancy, in its native format.
- Define policies to automatically manage Zoom message retention and disposition and enforce legal holds.
- Appropriately archive Zoom communications to meet in-country data residency and disposition requirements.
- Unmatched ability to quickly process large volumes of data (PBs) – no matter how many users or workloads.
- Control storage and processing costs via scalability on demand – use (and pay for) only what you need.
- Protect Zoom messages from alteration with WORM/SEC compliant immutable storage.

About Archive360

Archive360 is the unified data governance company transforming how organizations identify, collect, manage, and act on their data. Businesses and government agencies worldwide rely on the security, scalability, and scope of our cloud-native platform to address their increasing data governance obligations across growing volumes of disparate data. With Archive360, our customers are eliminating data silos, securing data access, increasing data insights, while reducing cost and risk. Archive360 is a global organization that delivers its solutions both directly and through a worldwide network of partners. Archive360 is a Microsoft Cloud Solution Provider, and the Archive2Azure™ solution is Microsoft Azure Certified. To learn more, please visit www.archive360.com.

Know Your Zoom Content

- Optionally index and extract text content from PDFs and images with Optical Character Recognition (OCR)
- Optionally detect objects within an image or video
- Optionally transcribe audio and video content with speech-to-text capabilities
- Optionally translate text across more than 100 languages

Monitor Zoom Content

- Optional AI-powered support of your FINRA Rule 3110 and NYSE Rule 342 supervisory review requirements as well as data privacy requirements.
- Automatically alert reviewers if policy violations are detected

Easily Find What You Need

- Search, visualize and analyze petabytes of structured and unstructured data.
- Keyword-based searching across all content and related properties using exact, partial, and wildcard matching.
- One search across archived data from multiple sources produces a single integrated set of search results.
- Produce search results that are not just relevant to the search term but are relevant to the user, based on role, location, search history and other factors.
