

# FastCollect™ for Slack

Ensure Slack communications are captured and managed to meet your regulatory, privacy and risk management obligations

Slack helps employees work together more productively, creating millions of records daily that could expose your organization to legal, regulatory and data privacy risks. Because messages are rapidly exchanged in a real-time conversation, users are more likely to send messages without thinking about the impact they may have, leading to potential complaints of harassment, discrimination, and retaliation, exposure of sensitive information or other costly policy violations.

Archive360 provides a highly scalable and secure archiving and data governance platform that centralizes the management of all types of structured and unstructured data – including messages, emails, and files – to meet today’s regulatory, legal, and business intelligence requirements. Archive360 for Slack automatically captures content directly from Slack in its native format and in full context so you can easily find an investigation’s relevant data, review Slack content like it appears in Slack and easily interpret conversations, protect the data against alteration, and produce audit logs to help legal teams maintain defensibility.

## Collaboration meets Compliance

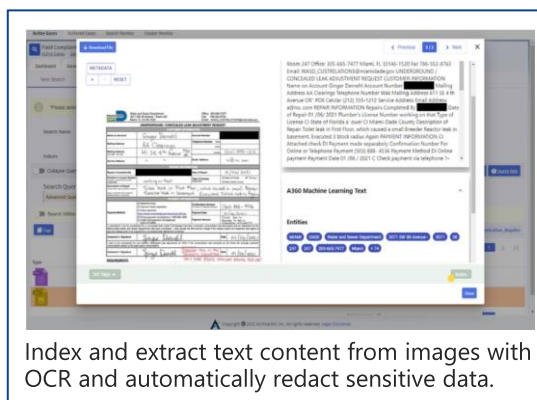

Ensure SEC, FINRA, MiFID II and other regulatory requirements are met easily and cost-effectively by automatically capturing Slack communications. Once in the Archive360 archive, content isn’t flattened into an email format like in other archiving applications. All content is captured and retained in its native format, so you can quickly and easily review Slack content in full context as it appears in Slack with our and/or leading e-Discovery solutions.

## Built for the Cloud

Archive360 is the first intelligent information management and archiving platform built for the Azure Cloud. This means that your sensitive Slack data, as well as all other archived data, always stays in your cloud under your direct control – encrypted with your keys. Unlike other vendors, Archive360 provides full data migration and cloud management of your Slack data, all in one solution. No paying for and relying on a proprietary third-party cloud provider with confusing, questionable security controls and data processing restrictions.

## Intelligent Risk Mitigation

Archive360 captures multiple communication channels including email and is optimized for organizations with heavy collaboration workloads. If communication starts in Slack and moves to email, you can track the entire conversation in one platform. All Slack content can be appropriately (based on content, context, ownership and geographic location) secured, archived, indexed, and classified. With Supervision & Surveillance, potentially sensitive data and PII can be identified, and reviewers are automatically alerted to policy violations.

## Automatically Archive and Manage Slack Conversations and Content

### Communication Types

- Workspaces
- Channels (Group, Private)
- Direct Messages (Group, Private — Internal & External)
  - One-to-One
  - Multiparty

### Message Attachments and Actions

- Images
- Audio & video recordings
- Links
- Message edits
- Message deletions
- Reactions
- Emojis
- Mentions
- Shared files

## Sample Customer

- 50,000+ Users
- 2+ million chats / day
- Locations across the world
- In-country data residency requirements

## Unmatched Slack Content Protection

- Zero-Trust security model – It's your data, in your cloud, under your control – unlike multi-tenant SaaS solutions, you have complete control over infrastructure and information security protocols.
- Secure attribute- and role-based access control with all activities recorded in a complete chain of custody.
- Our optional Security Gateway enables you to:
  - Encrypt your data on-premises before moving it to the cloud.
  - Store your private/public keys separately – on-premises/in the cloud.
  - Use unique encryption keys and data classification to apply fine-grained access control to specific sensitive fields as well as the file's metadata through masking, anonymization, or redaction.
  - Even system administrators can't access the data without explicit approval.

## Compliance Archiving With Dedicated SaaS

- Zero vendor lock-in! Your Slack data is stored in your cloud tenancy, in its native format.
- Define policies to manage Slack message retention and disposition and enforce legal holds.
- Appropriately archive Slack communications to meet in-country data residency and disposition requirements.
- Unmatched ability to quickly process large volumes of data (PBs) – no matter how many users or workloads.
- Control storage and processing costs via scalability on demand – use (and pay for) only what you need.
- Protect Slack messages from alteration with WORM/SEC compliant immutable storage.

## About Archive360

Archive360 is the unified data governance company transforming how organizations identify, collect, manage, and act on their data. Businesses and government agencies worldwide rely on the security, scalability, and scope of our cloud-native platform to address their increasing data governance obligations across growing volumes of disparate data. With Archive360, our customers are eliminating data silos, securing data access, increasing data insights, while reducing cost and risk. Archive360 is a global organization that delivers its solutions both directly and through a worldwide network of partners. Archive360 is a Microsoft Cloud Solution Provider, and the Archive2Azure™ solution is Microsoft Azure Certified. To learn more, please visit [www.archive360.com](http://www.archive360.com).

## Know Your Slack Content

- Optionally index and extract text content from PDFs and images with Optical Character Recognition (OCR)
- Optionally detect objects within an image or video
- Optionally transcribe audio and video content with speech-to-text capabilities
- Optionally translate text across more than 100 languages

## Monitor Slack Content

- Optional AI-powered support of your FINRA Rule 3110 and NYSE Rule 342 supervisory review requirements as well as data privacy requirements.
- Automatically alert reviewers if policy violations are detected

## Easily Find What You Need

- Search, visualize and analyze petabytes of structured and unstructured data.
- Keyword-based searching across all content and related properties using exact, partial, and wildcard matching.
- One search across archived data from multiple sources produces a single integrated set of search results.
- Produce search results that are not just relevant to the search term but are relevant to the user, based on role, location, search history and other factors.
